Use-Case Specification: Choose Character

1. Choose Character

1.1 Brief Description

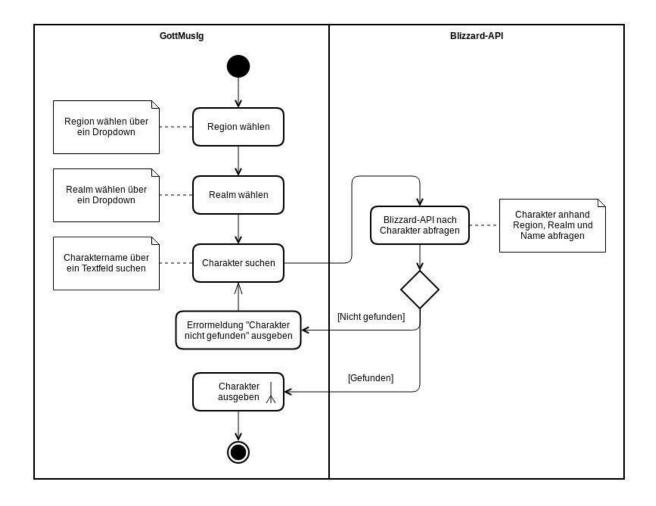

With this use case the user is able to search for his World of Warcraft character. He then gets information about the chosen character.

2. Flow of Events

2.1 Basic Flow

Mockup

https://github.com/GottMusIg/Documents/blob/master/images/SearchCharacterMockup.PNG

Feature File

```
as a user
I want to be able to search for my World of Warcraft character and have it displayed

Scenario: find character
Given I fill in all data
When I press the search button
And the character exists in the Blizzard API
Then I should see my character displayed

Scenario: character non-existent
Given I fill in all data
When I press the search button
And the character does not exist
Then I should see an error page

Scenario: incorrect input
Given I don't fill in all required data
When I press the search button

Then I should get an errormessage stating I didn not fill in all requested fields
```

3. Special Requirements

n/a

4. Preconditions

n/a

5. Postconditions

5.1 Set Cookie

A cookie has to be set that contains information about the chosen character

6. Extension Points
